

Recommendations for filtering ICMP messages (draft-ietf-opsec-icmp-filtering)

Fernando Gont

UTN/FRH

76th IETF meeting, November 8-13, 2009

Hiroshima, Japan

Changes from the last rev

- Populated a few sections
- Updated outdated references
- Miscellaneous edits
- Progress was slow... but now committing more cycles to it

Open Issues

- The document is currently heading for Informational.
 - Some suggested BCP
 - BCP might be a better target (personally, I'm happy either way)
 - Got some positive comments for aiming at BCP
- Current advice assumes what to do with ICMP messages that go “through” the device
 - Should advice also address filtering messages from/to the device?
 - Got some positive comments about this idea

Moving forward

- Currently working working on the ICMPv6 sections
- Rest of the document still needs work/review
- If you have feedback, post it on opsec@ietf.org, or send it to fernando@gont.com.ar
